```
fun = @(x)x(1)^2 - x(2)^2 - 10  + x(1) + 3*x(2) - 10;

x0 = [1,1];
[x,fval] = fminunc(fun,x0)
```

Problem appears unbounded.

*fminunc stopped because the objective function value is less than
or equal to the value of the objective function limit.*

x =

   1.0e+10 *

   -4.4130   -5.0014

fval =

  -5.5393e+20
